- 1 An apparatus for improved network printing comprising:
- a plurality of client machines connected to a network;
- a printer connected to the network by a network interface controller;
- 4 a printer server connected to the printer;
- 5 a printer controller connected to the network; and
- a header analyzer embedded in a memory of the printer controller.
- 1 2. The apparates of claim 1, wherein the network comprises a Local Area
- 2 Network.
- 1 3. The apparatus of claim 1, wherein the network comprises a Wide Area
- 2 Network.
- 1 4. The apparatus of claim 1, wherein the header analyzer is adapted to check
- 2 for any erfors preventing proper printing in a print job transferred from the
- 3 network interface controller.
- 1 5. The apparatus of claim 1, wherein the header analyzer is adapted to fix any
- 2 errors preventing proper printing in a print job transferred from the network
- 3 interface controller.
- 1 6. A method of improved networked printing comprising:

| 3 | 3 controller connected to a network in a header analyzer embedded in a printer |  |  |  |  |  |
| 4 | 4 controller; and  |  |  |  |  |  |
| 5 | outputting the repaired print jobs to a printer.                               |  |  |  |  |  |
|   |  |  |  |  |  |  |
| 1 | An apparatus for improved networked printing comprising:                       |  |  |  |  |  |
| 2 | a plurality of client machines connected to a network;                         |  |  |  |  |  |
| 3 | a printer connected to the network by a network interface controller;          |  |  |  |  |  |
| 4 | a printer server connected to the network;                                     |  |  |  |  |  |
| 5 | a printer controller connected to the printer; and                             |  |  |  |  |  |
| 6 | a filter embedded into a memory of at least one of the plurality of            |  |  |  |  |  |
| 7 | 7 workstations.  |  |  |  |  |  |
|   |  |  |  |  |  |  |
| 1 | 8. The apparatus of claim 7, wherein the network comprises a Local Area        |  |  |  |  |  |
| 2 | Network.   |  |  |  |  |  |
|   |  |  |  |  |  |  |
| 1 | 9. The apparatus of claim 7, wherein the network comprises a Wide Area         |  |  |  |  |  |
| 2 | Network.   |  |  |  |  |  |
|   |  |  |  |  |  |  |

The apparatus of claim 7, wherein the filter is adapted to check for any

errors preventing proper printing in a print job before the print job is outputted to

- 1 11. The apparatus of claim 7, wherein the filter is adapted to fix any errors
- 2 preventing proper printing in a print job before the print job is outputted to the
- 3 network.
- 1 12. A method for improved petwork printing comprising:
- 2 filtering a print job prepared by each of the plurality of client machines in a
- 3 filter embedded in the plyrality of client machines; and
- 4 printing the print job on a printer.
- 1 12. An apparatus for improved network printing comprising:
- a plurality of client machines connected by a network;
- a printer connected to the network by a network interface controller;
- 4 a printer server connected to the printer;
- 5 a printer controller connected to the printer; and
- a header analyzer embedded in the memory of a networked component.
- 1 14. The apparatus of claim 13, wherein the networked component comprises
- 2 the printer.
- 1 15. The apparatus of claim 13, wherein the networked component comprises
- 2 the printer server.
  - The apparatus of claim 13, wherein the networked component comprises the printer controller.
